Everything you need and more...

Kenter Shackles

The Kenter joining shackle is used to join two stud link chain elements ending in a common link. It is made of Heavy Duty forged steel (U2- U3 grade).

Forelock Shackles

Forelock Shackles connect mooring chain to sinkers and open link chain to chain.

Swivels

The Swivel is usually fitted between the anchor and the chain cable to prevent the chain cable from twisting and kinking.

An anchor shackle with a joining shackle (DT 105) or a Kenter link are needed to complete the assembly.
